If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

## **DETAILED ACTION**

### ***Acknowledgements***

1. This communication is in response to the supplemental claims amendment filed December 17, 2009 and further in response to the telephone and e-mail communications with Applicants representative Brian Siritzky on December 15, 16, 17 and 18, 2009 ("December Communication").
2. Claims 10-11, 17-37, 42, 45-47 and 51 have been canceled.
3. Therefore, claims 1-9, 12-16, 38-41, 43-44, 48-50 and 52-58 are pending.

### ***Examiner's Amendment***

4. An Examiner's amendment to the record appears below. Should the changes and/or additions by unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. §1.312. To ensure consideration of such amendment, it must be submitted no later than the payment of the issue fee.
5. Authorization for this Examiner's amendment was given in the December Communication.
6. The application has been amended as follows:
  - a. Cancel claim 47.
  - b. In claim 44, replace "10" with "1".

**Allowable Subject Matter**

7. Claims 1-9, 12-16, 38-41, 43-44, 48-50 and 52-58 are allowed.
8. The following is a statement of reasons for the indication of allowable subject matter.
9. The prior art of record:
  - c. Curie et al, U.S. patent No. 6,871,232 B2 ("Curie ").
  - d. Shuster (U.S. patent Publication No. 2006/0015366 ("Shuster").
  - e. Dutta U.S. patent Publication No. 2003/0093695 ("Dutta").
  - f. Terretta (U.S. patent publication No. 2001/0047275 A1) ("Terretta").
12. Curie generally discloses a method may comprise the steps of establishing a set of attributes, organizational information, and user roles for each organization; defining a plurality of resource provisioning policies for each organization based on selected attributes, organizational information, and user roles; receiving attribute information, organizational information, and user role information from each organization for a particular user, resource, or database; determining which resource provisioning policies are applicable to the user based on the received user role information, organizational information, and attribute information; and provisioning the user from a remote, centralized location with resources based on the applicable resource provisioning policies.
10. Shuster generally discloses a method for transacting over a wide area network, comprising the steps of: receiving use information about use of a computer resource by

users, the resource selected from computer hardware or software; debiting an account a debit amount determined from the use information; receiving traffic over a wide area network, wherein the traffic comprises requests originating from the resource in response to use of the resource by users, the requests associated with information designating the account; determining a credit amount based on a measure of the traffic received in the receiving step designating the account; and crediting the credit amount to the account to facilitate a barter transaction in which at least access rights to the resource are exchanged for at least a portion of the traffic.

11. Dutta generally discloses an approach for managing stored-value data objects, such as electronic tickets, comprises secure systems and procedures for ticket issuing, storage, and redemption. With these systems and procedures in place, stored-value data objects may be securely transferred to remote systems, such as a user's personal electronic device, for subsequent secure redemption, thus allowing the user to gain access to the desired goods or service upon redeeming the data object.

12. Terretta generally discloses determining whether a content a file has been previously downloaded or viewed by a user (e.g. redundancy check), wherein when its determined that the content filed has been previously downloaded or viewed, the user is prevented from downloading or viewing the content again (e.g. preventing redundant transactions).

13. If the user is already receiving/viewing content from RAMS, the user is denied access to the newly requested content.

14. Regarding the claimed terms, the Examiner notes that a "general term must be understood in the context in which the inventor presents it." *In re Glaug*, 283 F.3d 1335, 1340, 62 USPQ2d 1151, 1154 (Fed. Cir. 2002). Therefore the Examiner must interpret the claimed terms as found on pages 1-45 of the specification. Clearly almost all the general terms in the claims may have multiple meanings. So where a claim term "is susceptible to various meanings, the inventor's lexicography must prevail . . . ." *Id.* Using these definitions for the claims, the claimed invention was not reasonably found in the prior art.

15. The references Curie, Shuster, Dutta, and Terretta disclose as previously discussed. The references however do not teach at least: responsive to receiving said information at said RUVA server, the RUVA server conducting a redundancy check for said transaction and determining whether (a) said file has already been downloaded, in whole or in part, to said first computing device, or (b) said file has been previously requested by said first computing device, or (c) a resource usage ticket has already been issued for downloading the same file to the first computing device; and; based at least in part on said redundancy check, said RUVA server setting a weighting factor for said transaction, said weighting factor indicating to what extent value should be awarded for the transaction, and wherein, when said transaction is determined by said redundancy check to be redundant, the weighting; allocating compensation or rewards related to the transaction to said second user based at least in part on (a) said indication of said weighting factor for the transaction, and (b) the determined extent of resources provided by the second computing device related to said transaction.

16. Therefore, the claims of the instant application are not obvious over Curie, Shuster, Dutta, and Terretta for the reasons given above. Yet even if the missing claimed elements were found in a reasonable number of references, a person of ordinary skill in the art at the time the invention was made would *not* have been motivated to include these elements in Curie, Shuster, Dutta, and Terretta because: Curie is not concerned in monitoring and reporting the actual resource usage and rewarding or compensating a user based on a determined actual resource usage. Curie is concerned in provisioning a resource based on predetermined provisioning policies.
17. Additionally, the combination Curie, Shuster and Dutta, clearly destroys the intent and purpose of Terretta taken alone and/or in view of Curie, Shuster, Dutta, and Terretta use of, for example, a redundancy check to only prevent simultaneous downloading or viewing of files.
18. Accordingly, the present invention is also distinguishable over Curie taken alone and/or in view of Shuster, Dutta, and Terretta.
19. Therefore, the limitations lacking in the prior art, in combination with the other limitations clearly claimed for patent, are novel and unobvious.
18. Foreign prior art and NPL search was conducted however no relevant prior art was found.
19. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "comments on statement of reasons for allowance".
